## CETRIS ${ }^{\circledR}$ PROFIL

CETRIS PROFILE © is a cement-bonded particleboard, produced in thickness of 10 or 12 mm thickness, with embossed surface imitating the texture of wood or slate. It is produced by pressing a mixture of wood chips (19\% of weight), Portland cement (69\% of weight), water (10\% of weight), hydrating additives ( $2 \%$ of weight). The basic size of the board is $3,350 \times 1,250 \mathrm{~mm}$. We deliver the boards cut to the sizes specified by the customer, with rounded edge or chamfered edge to $45^{\circ}$ angle, milled boards with thickness of 12 mm rebated. Thanks to its decorative look, CETRIS® PROFIL boards are primarily used as facade walling boards in exteriors and interiors. The cement-bonded particleboard are used mainly as a structural material in cases where moisture resistance, strength, fire resistance, ecological and hygienic harmlessness are required at the same time. CETRIS® Boards do not contain either asbestos or formaldehyde; they are resistant to insects and mold exposure. They are fireproof and can provide sound insulation. The boards can be worked with conventional woodworking tools.
