

**CETRIS® BASIC**

CETRIS® BASIC is a cement-bonded particleboard with smooth naturally cement-grey surface. It is produced by pressing a mixture of wood chips (19% of weight), Portland cement (69% of weight), water (10% of weight), hydrating additives (2% of weight); it is available in standard thicknesses of 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, and 32 mm. Upon prior agreement it is also possible to deliver the following thicknesses: 34, 36, 38 and 40 mm. The basic size of the board is 3,350 x 1,250 mm. We deliver the boards cut to the sizes specified by the customer, with rounded edge or chamfered edge to 45° angle, milled starting from the 12-mm thickness with half-groove, starting from the 16-mm thickness with tongue and groove. The boards may also be delivered with pre-drilled holes. The cement-bonded particleboard are used mainly as a construction material in cases where moisture resistance, strength, fire resistance, ecological and hygienic harmlessness are required at the same time. CETRIS® Boards do not contain either asbestos or formaldehyde; they are resistant to insects and mold exposure. They are fireproof and can provide sound insulation. The boards can be worked with conventional woodworking tools. When using CETRIS® BASIC boards, the composition of the board and its origin - cementitious material - must be respected. Particles of free lime contained in Portland cement may penetrate the surface of the board and airborne carbonation and efflorescence may occur, which disturb the uniform appearance of the board surface. The surface of the boards is not uniform in colour, therefore claims for appearance reasons cannot be accepted.
